

## MCSE: Data Platform

### The Qualification:

The Microsoft Certified Solutions Expert (MCSE): Data Platform certification demonstrates your broad skill sets in building and administrating enterprise-scale data solutions both on-premises and in cloud environments.

Earning an MCSE: Data Platform certification will qualify you for such jobs as database analyst and database designer.

To be awarded the MCSE: Data Platform designation, students must pass a total of 5 individual Microsoft examinations. The first 3 of these make up the MCSA: SQL Server 2012 certification

### Prerequisite:

Before studying for the 2 examinations detailed below, students must hold the MCSA: SQL Server 2012 certification.

### Course Content:

- **Developing Microsoft SQL Server 2012 Databases – (Test 70-464)**  
Implement database objects; Implement programming objects; Design database objects; Optimise and troubleshoot queries.
- **Designing Database Solutions for SQL Server 2012 – (Test 70-465)**  
Design database structure; Design databases and database objects; Design a troubleshooting and optimisation solution.

### Study Options:

1. **Basic:** We supply high quality course manuals. Then you study independently.
2. **Popular:** We supply high quality course materials, consisting of manuals, CDs and progress testing. We then provide additional support. We provide the student with the necessary hardware and software to carry out the exercises built into the course materials. This is done through a series of supervised lab sessions at our centre, which can be arranged at times to suit the student.

### Taking the Examinations:

The Exams for the MCSE programme can be taken at any Prometric Testing Centre. The cost of sitting these examinations is not included in any fees quoted.
